

# Standard Subframe

Every so often, you have a project that needs it all and nothing can support it. This is the solution for you. This substitution frame system gives you six (6) independent mounting posts to mount your car body all along its length, six not enough? Add more\*. It's modular, so add as many as you want.

This system also works with 55-57 Thunderbirds, and car bodies that will not support its own weight from the body mounts.

## Specs

Cross Members	Three (3) cross members, 63" wide, each with two mounting posts, fully adjustable thru a heavy duty coupler to mount to your body. Extra cross member.
Mounting Plate	2"x4" mounting plate with a single hole vertically.
