

# Valance Kit

---

If your car body has a rear valance or tailpan, you may need a valance bracket to extend past the valance and then up to the body mount. Our standard valance bracket is 4" tall and has an offset hole to one side. They slide over the top of our mounting arms, as with most all brackets, and bolt to a vertical body mount.

AT-VALANCE-BKT

Our Mounting Brackets are manufactured in Utah and comes with our 1 year steel warranty. Unless otherwise noted, the Mounting Brackets ship bare steel. Powder Coating is also available.
