

AutoTwirler Classic

The AutoTwirler CLASSIC is our original fixed height rotisserie model. The pivot point is welded to the top of the upright post. You'll need to use an external lifting device to lift your car body or frame about 3.0 to 3.5 feet off the ground to bolt the rotisserie to it.

Like our other units, the base is fully welded together for strength and long term durability.

You can balance the car in the same fashion as our ELITE model. That is assuming you have a lifting device to raise the car up to mount it.
